

## **SABR Canada Conference – Oligometastasis Case Competition**

The SABR Canada Conference invites residents and fellows registered in Canadian Radiation Oncology training programs in 2024-2025 to participate in the Oligometastasis Case Competition.

Three cases will be selected for presentation and discussion at the SABR Canada Conference on June 6<sup>th</sup> in Kelowna, BC. A travel award will be provided to the selected trainees.

Applicants are encouraged to submit challenging cases highlighting complexities in management of oligometastases with SABR. Topics of particular interest include:

- Re-irradiation in patients with metachronous oligometastatic disease
- Overlapping radiation fields in the treatment of primary disease with synchronous oligometastases
- Oligometastases in disease sites where the oligometastatic paradigm is less established (e.g. head-and-neck and upper-gastrointestinal primaries)

Case submissions (maximum 300 words with 1-3 relevant images) should describe the clinical scenario, workup, and management. Each case should be accompanied by three multiple choice questions relevant to challenges of the case. Each case submission is to have two authors (one trainee and one staff supervisor). Each applicant may submit multiple cases for consideration; the top scoring case from each applicant will be considered for selection.

Submissions are due **Friday February 28<sup>th</sup> 2025 at 11:59 PM PST**. Please contact Dr. Amir Safavi ([safavia1@mskcc.org](mailto:safavia1@mskcc.org)) with inquiries and submissions.
